

# Solution Architecture

Solution Architecture

=====

Reference: Solution Architecture.pdf

Project: MedSafe

High-Level Architecture

-----

[ Describe: Browser -> Streamlit (port 8501) -> HTTP -> FastAPI (port 8000) -> Services (RxNav, AI client, extractor, summarizer, alternatives, chatbot) ]

Components

-----

- frontend/app.py: Streamlit UI, calls BACKEND\_URL (default http://127.0.0.1:8000)
- backend/main.py: FastAPI routes (/chat, /extract, /summarize, /alternatives; frontend may expect /interactions, /history - align as needed)
- backend/services/: rxnav.py, ai\_client.py, extractor.py, summarizer.py, alternatives.py, chatbot.py

Data Flow

-----

- User input -> Frontend -> POST/GET to Backend -> Service layer -> External API or internal logic -> Response -> Frontend -> User

Deployment View

-----

- Local: uvicorn backend.main:app; streamlit run frontend/app.py
- [ Add production deployment if applicable ]

Security & Config

-----

- API keys via environment variables
- No medical advice; disclaimer in UI
